Waterproof USA to Show at DEMA Show 2015

Waterproof USA continues to be a leader in the industry by producing award-winning, high-quality diving suits and accessories. These exceptional suits and accessories are created and tested by the head designers to ensure quality and reliability. With DEMA 2015 in Orlando, FL just around the corner, Waterproof USA is eager to display many products at the show: the new Meshtec 3D Undergarment, the D6 Drysuit, the D9 Breathable Drysuit, the W50 Fullsuit, the Ultima Dry Glove System, and the Police and Rescue Suits.

For 2016, Waterproof developed a new Meshtec 3D Undergarment from the Waterproof patented 3D Mesh lining in the D1 Hybrid Drysuit. This undergarment enables divers regardless of drysuit brand or type to experience the 3D Mesh lining that made the D1 Hybrid a class of its own. The Meshtec 3D is constructed with a stretchy 3mm mesh for a snug fit and easy donning. The mesh does not compress, allowing for an ideal warm and comfortable dive experience.

Waterproof’s D6 Drysuit with a light yet tough exterior, is great for casual and leisure diving. The D6 has a built in XLITE Flexible boot, great for a wide variety of diving adventures. The D6 is constructed from High Tenacity nylon-based trilaminate, with 100 gr butyl coating. Perfect for the casual diver, the D6 Drysuit will provide the ultimate dive experience.

The popularity of D9 Breathable Drysuit has skyrocketed since its debut, and has become the favorite of many divers. The D9 Breathable broke boundaries because of the lightweight construction and portable design, allowing for easy transportation during travel. Weighing less than five pounds, it is constructed from Cordura Nylon Quad-lam (a light quad-layer fabric) with a breathable membrane. Perfect for the traveling diver, the D9 Breathable Drysuit will not weigh you down.

Unveiling for the first time at this year’s DEMA, the Waterproof W50 Fullsuit is the next installment in the Waterproof Sports Series. This suit features gender specific design, Waterproof Personal Accessory Dock for expandable pockets (WPAD), and reinforced shoulders, seat, and knees. Constructed of UltraFlex Neoprene, you will experience a snug fit with minimal water flow.

Waterproof also introduces their Ultima Dry Glove Ring System, developed from extensive testing of the pros and cons of other dry glove systems to create the optimal performing system. This system fits most Waterproof Drysuits with integrated silicone seals and ISS, and can be mounted to all drysuits with fixed latex seals to achieve a complete dry glove system. With the ability to see, hear, and feel when the ring connects properly or when disconnecting, this system is as close to “fool proof” as it gets.

Waterproof’s Rescue and Police Suits will be on display, bringing a new type of exposure suit in the world of the professional rescuer. Equipped with a protective impermeable full body
garment, this Hazmat style drysuit is ideal for Police Dive and Rescue Teams. With the advanced knowledge of impermeable materials, it was only a matter of time before Waterproof’s expansion into the Hazmat market.

Göran Ehlmé, one of the founders of Waterproof International, will once again discuss his many experiences and encounters in extreme conditions, and recount how the environment inspired him to create Waterproof in his Waterproof: TRUE R&D seminar scheduled on Thursday, November 5th, 2015 from 2:30pm to 3:30pm. Be sure to sign up to hear his remarkable journey and the development of the Waterproof International brand, and what it has become today.

Waterproof USA is eager to attend the DEMA Show 2015 in Orlando, FL and showcase all future and current models of high-quality, award-winning Drysuits, Wetsuits, Glove Systems, and Marine Wear.

Be sure to visit Booth #1225 to get an up-close Waterproof USA experience.
